

IMPACT

ISO/IEC 17025

Authorized Testing Inc., abbreviated ATI, is a California-based company established in 1973. Over the years, it has cemented itself as a leader in the aerospace and aviation industry, specializing in the qualification, inspection, and certification of multi-component cylinders for alternative fuels like natural gas and hydrogen.

ATI's facilities are cutting-edge. They operate as an independent third-party test laboratory, recognized by large bodies like US DOT, Australia Gas Association (AGA), and Transport Canada. The company holds acclaim for its various innovations within the aerospace and aviation industry, with many international governments recognizing ATI's certifications as standards. Its corporate goal is clear - to provide high-level independent inspection and testing services that promote the safety of pressure vessels and components worldwide.

ATI enlisted the help of IMSM in 2023 to streamline its quality control plan and meet the stringent demands of the aerospace sector. To achieve this, they pursued ISO/IEC 17025 accreditation with help from Area Manager Tina Travierso. Tommy Hin, the President of ATI, commended Tina for her 'hands-on approach and consistent weekly follow-ups', which proved instrumental in implementing ISO/IEC 17025.

Before enlisting IMSM, ATI explored continuous improvement training but found it falling short of their evolving needs. The support provided by Tina empowered ATI to document and control every aspect of their management system effectively.

Having achieved accreditation in just three short months, Tommy has described ATI's experience with IMSM as 'excellent' because 'everything is documented and controlled'. ISO/IEC 17025's implementation within ATI's management system has led to immediate and significant benefits, with expectations for continued improvement.
